

Watch Smarts

Sam Hanna, Eric Wendt, Akinori Kahata

Hardware

Explanation

Our smartwatch is a collaboration between health-computing, computer security, and portable hardware. The goal was to create a device that could effectively measure heart-rate while providing the wireless capabilities that all smart devices have. We have mostly achieved this goal, with exception to the physical implementation of the heart-beat sensor. This small roadblock was due to late shipments because COVID-19 and faulty hardware, but the software works perfectly.

Application

Video Demo

Basic Principles

- Detect a panic attack
- Give the user options to help calm down
- 3 available options
 - Guided Breathing
 - Mindfulness Exercise
 - Forced Focus

Details

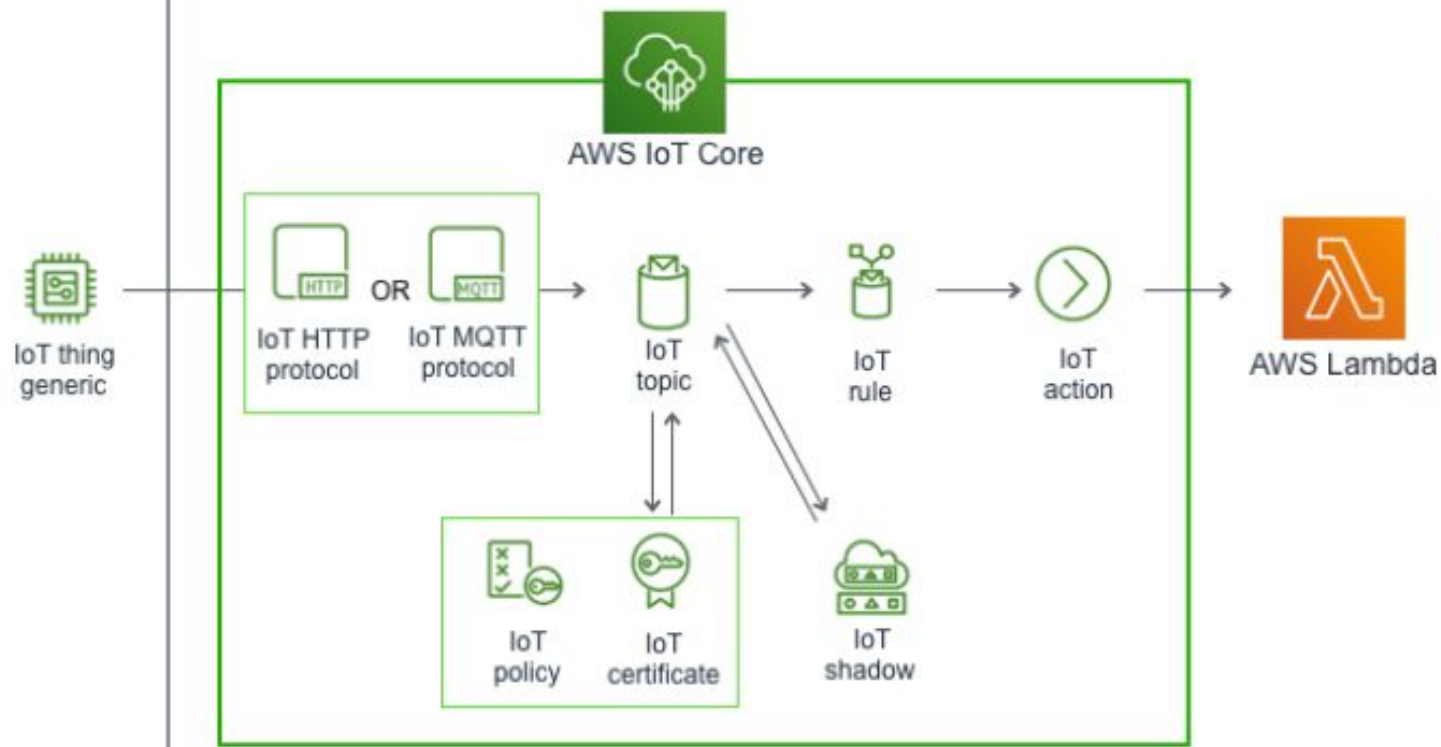

- Supposed to use heart rate monitor to detect panic attack
- Instead use buttons on watch
- Written in Arduino code
- Use watch face to give selections and walk through calming exercises

Cloud

Making connection between ESP8285 with AWS IoT

WiFi Chip ESP8285

AWS IoT Core

f.e. Device Shadow

MQTT Protocol

With SSL

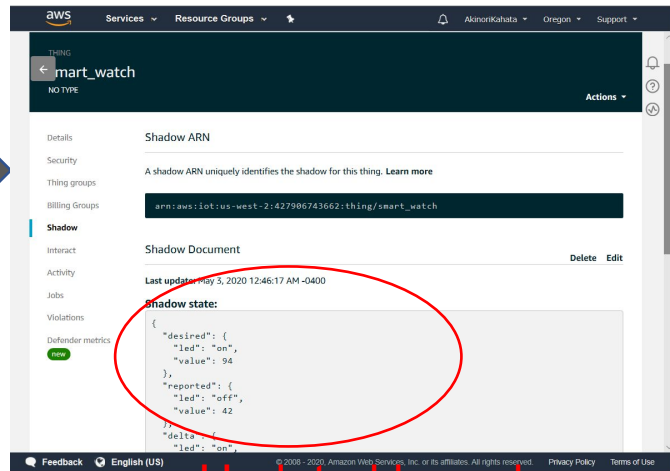

The screenshot shows a terminal window with a title bar containing a blue icon and the text 'COM6'. The terminal output displays the following sequence of events:

```

Attempting to connect to SSID: Straight Cash Homie...ok!
Setting time using SNTP.....done!
Current time: Tue May 5 14:57:55 2020
MQTT connecting connected!
Sending [$aws/things/smart_watch/shadow/update]: {"state":{"reported":{"Test":24}}}
Received [$aws/things/smart_watch/shadow/update]: {"state":{"reported":{"Test":24}}}
Sending [$aws/things/smart_watch/shadow/update]: {"state":{"reported":{"Test":85}}}
Received [$aws/things/smart_watch/shadow/update]: {"state":{"reported":{"Test":85}}}

```

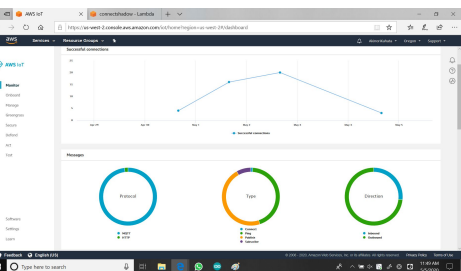

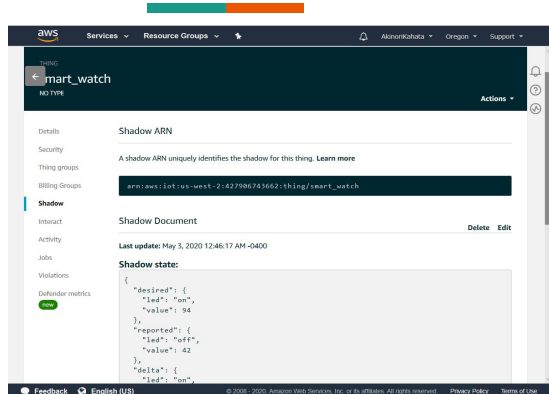

Updated based on
Device's information

AWS IoT Provides the Certification, and I set this to program

[illegible]

We can use AWS resources by using Lambda

AWS IoT Shadow

We can check the connection at IoT core

- Program execution environment
- A lot of usage

(One Example)

- Extract the message from IoT Shadow
- Make the file
- Upload the Storage

AWS provide S3 Default Encryption for S3 Buckets

Amazon Simple Storage Service

Amazon DynamoDB
